**Recommendations after the Treatment-Cockroach:**

- Do not wash off chemical residue for a minimum of 1-2 weeks (under the sink, behind the fridge and stove and other residue not visible).
- You can clean / wipe off any visible powder residue for countertops, drawers, or anything, or item that you need to use.
- Vacuum as often as possible. Make sure to clean and remove the clutter from the house. Clean the kitchen cupboard, pantry and behind the fridge regularly.
- Do not leave unwashed dishes from the kitchen sink.
- Make sure that there is no open / uneaten food in the kitchen pantry or other area in the house.
- Dry all the dishes after washing and keep them right away. Dry the kitchen sink and remove any leftover before going to bed.
- Dispose the garbage as often as possible.
- Make sure to follow all recommendations, for a successful treatment.
