Recommendations after the Treatment-Bedbugs:

- Wipe off any visible residue, mop the floor and keep the residue along the baseboard and bed frame. The baseboard, wall voids, cracks and crevices can also be harborage for pests, kindly vacuum this area as well.
 - Vacuum as often as possible. Thoroughly vacuum the top, sides and bottom of the mattress and box spring, including the railing, head, and foot boards prior to putting the linens back to the bed. We also recommend using a mattress protector to prevent bedbugs from entering and harboring inside the mattress and box spring.
 - Wash all clothes and bed linens regularly. Make sure all clothes are washed before returning it to the drawer / cabinets. It should be washed on warm water and heat dried for a minimum of 30 minutes on high temperature.
 - De cluttering the unit is highly recommended to avoid pest from nesting on this items.
 - If coming from an out of town trip or if you have recently stayed over a hotel or a relative or friend's house, make sure to wash all clothing as soon as you get home.
 - Good sanitation, regularly vacuuming, laundering and discarding f infested items are ways to control this activity. It is highly recommended to follow this after each treatment and on a continuous basis to prevent them from coming back.
-
