**Recommendations after the Treatment-Mice:**

- Remove all food source. Store all food in a plastic or glass containers.
- If you have pets. don't leave pet's food in paper packages as mice can easily chew on them.
- Make sure to clean and tidy your house. Make sure that your home is clutter free as mice can easily find places for nesting.
- Proper disposal of garbage. Outside bins must be covered.
- Close all possible entry points. Mice are small and can fit on almost anywhere.
- Mice takes time to completely control them, it is important to have the bait stations checked and rebaited after a month of initial set up and on a quarterly basis to make sure that the baits inside are fresh. Poison baits covered with dirt and dust loses its effectivity.

If you have any question or concern, please give us a call.
