Recommendation – Drain Flies

- In the bathroom – Check the filter in all the affected shower drain and remove hair, debris or grime from it. This way, we would be able to destroy their breeding ground.
- In the kitchen sink – Use a metal pipe brush into the drain, extend it as far down as possible.
- Pouring warm water on a regular basis is also recommended to wash off any sign of debris.
- Clean all the drains on a regular basis, once a week or once every two weeks. Make sure that drains are free from any debris or grime, you can use gel drain cleaners to make sure your drains are clean.
- Make sure to remove any food dropping from the kitchen sink filter after washing your dishes.
- Wipe off any visible chemical residue, mop the floor and vacuum all carpeted areas.
